

GOLF COURSE MAINTENANCE

As part of our maintenance schedule of the golf course we will be carrying out the following:

- **Thursday 24th August** - Solid tining of the greens
This allows the air to percolate into the profile and enhance the root growth
- **Thursday 14th September** - Verti-cut greens
This work removes any build-up of thatch in the surface, and generally encourages a firmer and smoother green roll
- **Tuesday 19th September** - We will be hollowing, coring and top dressing
GOLF COURSE CLOSED UNTIL 2.30PM
This work is the most disruptive to the surface, but a necessity to develop root growth, material exchange and general good green health. It is an essential part of our greens maintenance program. We will be carrying out the work slightly earlier this year which will allow repair to the surface more quickly with growth potential. We will then top dress and brush as required to exchange material and fill the holes
